

# Bluebird

## Communication Aid

Bluebird represents a big step forward in digitized speech technology.

With 6 hours of clear, high quality recordings stored on a 256 MB memory card, Bluebird offers the latest technology in an easy-to-use and affordable product.

Messages can be easily be recorded into any of the 10 communication overlays in Bluebird. Overlays are selected by flipping to the desired overlay and then pressing the numbered overlay button to the left of the keyboard. In addition to the 10 communication overlays, Bluebird has an additional 'toy control' overlay. Two jacks are provided to allow adapted toys to be plugged in and controlled from the keyboard.

Overlays on the Bluebird contain 24 buttons in a 6 x 4 configuration. If you need fewer and larger buttons, you can use the PMLS software to set up different keyboard configurations. Recorded messages can be spoken by pressing the button on the overlay or using a switch for one or two switch auditory scanning.

### Other Features of the Bluebird include:

- Built-in legs that can be flipped up to provide a 15 degree tilt
- A hand-strap on the back of the device for easier use by ambulatory individuals
- Rechargeable batteries
- Accessible volume control buttons
- Size: 11.7" x 8.5" x 1.4"
- Weight: 2.25 lbs

Use *Picture Master Language Software (PMLS)* to create communication overlays for your computer or to program your portable Bluebird communication device.

Live. Learn. See. Communicate.
